

NUCLEIC ACID MOLECULES THAT ARE DIFFERENTIALLY REGULATED IN A
BIPOLAR DISORDER AND USES THEREOF

Abstract of the Disclosure

- 5 In general, this invention relates to nucleic acid and amino acid sequences that are differentially regulated in a bipolar disorder, and the use of these sequences as targets for the development of compounds that treat a bipolar disorder. In addition, the methods and sequences described herein are useful for the diagnosis, monitoring, and treatment of a bipolar disorder in a human patient.
